DESCRIPTION

The MM4050 provides a DC output voltage or current proportional to a DC input signal. It is useful in converting a voltage to a current, a current to a voltage, or for scaling signal levels from one amplitude to another and for increasing drive capability.

The MM4050 contains a superior input amplifier for narrow span inputs down to 10 mV.

All Wilkerson products are designed with RFI filters and lightning protection to reduce susceptibility to electrical noise and damage by lightning.

TYPICAL APPLICATIONS

Use for voltage / current scaling or level conversion, buffering and noise reduction.
