14 dBi GAIN

2.4GHz BAND 16 ELEMENT HEAVY DUTY YAGI

## FEATURES

- Rugged
- Weatherproof
- Lightweight
- Durable

## DESCRIPTION

Yagi antennas achieve more gain than vertical antennas by concentrating radiation in a single direction. Their reduced gain from the back end helps keep other signals from interfering with normal operation. The front to back ratio is an important characteristic of a yagi antenna.

A yagi antenna can be operated with the elements mounted vertically or horizontally, but the most common use for industrial wireless is vertical. The transmitting and receiving antenna must

both have the same element polarization for satisfactory operation. A large loss in signal is experienced when the elements are crossed polarized.

When a vertical omnidirectional antenna is used on the control end of a polling system, a yagi can be used on each slave unit for maximum gain and reduction in interference due to the front to back ratio gain reduction.

These heavy duty yagi antennas are constructed of 1"aluminum U channel with 3/8" solid elements. All exposed

areas are coated with UV polyester. The balun assembly is filled and sealed with elastomeric thermoplastic.

The connector is a Type N Female on a 12" teflon pigtail cable.

Hybrid radome construction provides excellent weather protection for the driven element. The radome is constructed of UV inhibited ABS. The heavy duty mounting plate is extruded aluminum. Stainless steel V bolts are provided for long term reliability and resistance to corrosion.
